

RISK ANALYSIS

Recommendation

Risk ID	Level	Affected Service	Recommended Mitigation	Priority / Timing
R-01	Critical	vsftpd / FTP	Disable/remove compromised FTP installation; replace legacy FTP with SFTP where required; verify integrity and rescan.	Immediate
R-02	Critical	UnrealIRCd / IRC	Stop/remove compromised service; if required, reinstall from a trusted source and supported version; verify integrity and rescan.	Immediate
R-03	Critical	MySQL / PostgreSQL	Change default or weak credentials; use strong unique passwords; restrict connections; apply least privilege; review logs.	Immediate
R-04	Critical	Tomcat AJP :8009	Validate exact Tomcat version and scanner evidence first. If affected, upgrade; if AJP is unnecessary, disable or restrict it.	High — validate first
R-05	Critical	Ubuntu 8.04 OS	Migrate to a supported OS. Until migration, isolate systems, minimize exposed services, and apply network restrictions.	High priority
R-06	High	Samba / SMB :445	Validate exact version/evidence; patch or upgrade if affected; restrict SMB access and strengthen authentication.	High priority
R-07	Critical	rsh/rlogin/rexec	Disable legacy r-services and replace them with SSH; restrict administrative access to authorized systems.	Immediate
R-08	High	Java RMI :1099	Restrict RMI to required hosts; disable unnecessary interfaces; apply updates and review access controls.	High priority
R-09	High	Web directory indexing	Disable directory listing; remove unnecessary web files; restrict documentation/test directories.	High priority
R-10	High	Apache/PHP web service	Upgrade Apache/PHP to supported versions; disable unnecessary TRACE; configure security headers; retest.	High priority
